TECHNICAL SKILLS

LANGUAGES & CORE

JavaScript (Vanilla JS) | PHP | HTML5 / CSS3

FRAMEWORKS & CMS

WordPress (Themes & Plugins) | ACF Pro | Gutenberg Blocks | WordPress REST API | WooCommerce | jQuery | React

LAYOUT & BUILD TOOLS

Tailwind CSS | SCSS | BEM | Figma | Gulp | Webpack | Vite

About Me

WordPress & Frontend Developer with **4 years of experience in web development**: commercial work in iGaming (HTP resident) and freelance development of turnkey websites. I specialize in building responsive interfaces with a **Mobile First** approach and **BEM** methodology, as well as developing custom **WordPress** themes and plugins from scratch (ACF Pro, Gutenberg Blocks, OOP PHP). I use clean **Vanilla JS** and asset optimization, which ensures fast page load speeds. I have hands-on experience with PHP hooks and WordPress REST API integration.

I transitioned into IT from the banking sector with a strong analytical foundation. I build interactive applications with **JavaScript (ES6+)**, **React**, and modern component architecture. I work with containerization via **Docker**, **Webpack/Vite** tooling, and automated deployment pipelines using **GitLab CI & GitHub Actions**.

Work Experience

WordPress & Frontend Developer

2024 — Present

MaxBitSolution

Developing responsive interfaces, creating and customizing WordPress themes and plugins in the SEO department (hybrid schedule).

- Built Mobile First interfaces with a mobile-first priority (90%+ of traffic in iGaming comes from mobile) and optimized Core Web Vitals (LCP, FID, CLS) page load speed improved by 30–40%, projects consistently stay in Google's green zone. Made independent UX/UI decisions without Figma mockups.
- Integrated layouts into WordPress from scratch: wrote custom themes in object-oriented PHP (WP_Query, $wpdb, Composer PSR-4), separating business logic, data handling, and templates.
- Built custom Gutenberg blocks and patterns, enabling the SEO team to assemble pages without developer involvement.
- Performed WordPress customization (themes, templates, plugins) and developed custom plugins for the SEO department's unique business needs.
- Implemented Schema.org (JSON-LD) structured data, which increased search CTR by 20–30% through rich snippets (stars, bonuses, ratings).
- Optimized asset and image performance (WebP, lazy-load, minification) and configured browser caching (Cache-Control, Expires) repeat visit times decreased by 50%.
- Worked with REST API for data exchange between WordPress and external SEO department services.
- Handled technical SEO tasks: 301 redirects, canonical links, robots.txt, sitemap.xml generation and validation, fixing indexing errors based on Google Search Console data 100% indexing of key pages.
- Collaborated closely with the SEO team: promptly fixed bugs affecting rankings (average resolution time: 2–4 hours).

DEVOPS & ENVIRONMENT

Docker | GitLab CI (CI/CD) | Git / GitHub | npm / yarn | Lighthouse | Linux

LANGUAGES

Belarusian	Native
Russian	Native
English	B1 (Intermediate)

EDUCATION

2017 2019

Higher Education (Bachelor's)

IPP (Institute of Parliamentarism and Entrepreneurship)
Major: Finance and Credit, Minsk

2014 2017

Associate Degree / College

Minsk College of Entrepreneurship
Major: Operations in Logistics, Minsk

KEY ATTRIBUTES

Team Collaboration | Time Management | Rapid Tech-Stack Adaptation | Critical Thinking | Attention to Detail | Constructive Communication

- Independently owned the full task lifecycle from requirements analysis and design to development, QA, and deployment via GitLab CI (automated builds reduced manual release time). Supported an affiliate/referral program.

Tech stack: PHP, JavaScript (ES6+), SCSS, MySQL, WordPress, REST API, Gutenberg, GitLab CI, Docker, cloud hosting.

Frontend Developer

2022 — 2024

Freelance (Kwork, Habr Freelance, FL, Weblancer)

Turnkey website development, custom WordPress themes/plugins, e-commerce, responsive layouts, web security, client consulting.

- Successfully delivered turnkey websites from concept to launch: hosting acquisition, domain selection and setup, SSL configuration, final deployment.
- Integrated layouts into WordPress from scratch: built lightweight, high-performing custom themes and WooCommerce stores without bloated templates or page builders, using PHP hooks, custom templates, and REST API.
- Worked with PHP hooks to flexibly extend the functionality of WordPress and WooCommerce themes.
- Integrated third-party APIs (payment providers) for e-commerce solutions with secure transaction processing.
- Developed projects with React.
- Ensured web security (validation, sanitization, escaping, protection against XSS and SQL injection) and SEO-friendly code (clean semantics, structured data, fast image loading) at the coding stage.
- Converted Figma mockups of any complexity into Pixel Perfect, responsive code for all devices, following a Mobile First approach. Worked from references and text descriptions delivered complete projects when no mockups were available.
- Customized the WordPress admin panel and consulted clients on administration, content management, and adding new sections so they could update the site without coding knowledge.
- Provided post-launch support: website administration, content updates, adding new sections.

Tech stack: PHP, JavaScript (ES6+), React, HTML5, SCSS, Tailwind CSS, MySQL, WordPress, WooCommerce, REST API, Gutenberg, Git, cloud hosting.

Logistics Specialist

2018 — 2022

LLC "Retail Banking Systems" (formerly Home Credit Bank)

Managed credit agreement processing workflows, coordinated B2B partnerships between the bank and partner e-commerce platforms, and maintained internal bank reporting.

In 2023, transitioned into web development to build a professional career in IT.
